DETAILED ACTION

1. Claims 1-16, and 18-24 are pending. Applicant's amendments and arguments filed 9/13/01.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 1751

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-16 and 18-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 909,809 for the reasons of record set forth in Paper #8.

7. Claims 1, 4-13, 18-20, and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 95/34628, WO 97/48787 or WO 97/38074 for the reasons of record set forth in Paper #8.

Response to Arguments

With respect to '809, Applicant states that molecular oxygen is not synonymous with atmospheric oxygen and that claim 18 includes the unusual feature of a textile being bleached subsequent to its removal from a liquied bleaching system and after having been dried. In response, note that, the Examiner sees no distinction between the molecular oxygen as taught by

Art Unit: 1751

'809 and atmospheric oxygen. Additionally, the Examiner asserts that the composition as taught by '809 would have the same bleaching properties as recited by instant claim 18 since '809 teaches bleaching compositions containing the same components in the same proportions as recited by the instant claims.

With respect to '628 and '787, Applicant states that both references require the use of peroxygen bleach systems and are not substantially devoid of such systems. Note that, the Examiner asserts that both references teach, as an alternative to peroxygen bleach, the use of molecular oxygen which is the same as that recited by the instant claims. While this is not a preferred embodiment, it is clearly contemplated as an alternative and the Examiner sees no distinction between atmospheric oxygen and molecular oxygen. Oxygen is the same whether it is sourced from the air or is molecular oxygen.

With respect to '074, Applicant states and this reference requires the intermediacy of aldehydes to achieve bleaching. '074 states that aldehydes are **preferred** components but are not required in the composition.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1751

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
